1. The symbol "●" indicates standard configuration, the symbol "-" indicates no such configuration, and the symbol "○" indicates optional configuration. 2. The NEDC comprehensive driving range label data is based on simulated data from engineering development, which may vary due to different testing factors such as site, weather, road conditions, battery level, and load, for reference only; 0-100 km/h acceleration in 4.5 seconds is the fastest acceleration, 95% maximum climbing ability is the maximum climbing slope in unloaded condition, which may vary due to different testing factors such as site, weather, road conditions, battery level, and load, for reference only. 3. The radar will continue to modify and improve the product, and the equipment and parameters of the vehicle product may change accordingly. We will do our best to ensure the completeness and accuracy of the information, but due to some objective reasons, such as the uncertainty of screen or paper materials, the continuous updating of laws and regulations, different understandings of relevant information by individuals, and the untimely updating of introduction information, there may be certain differences between the actual vehicle and the introduction information. Please refer to the actual vehicle for details.
